

THE K CHAIR · WOOD BLOCK BRACKET · 1:1 CUTTING TEMPLATE

rev F.2 · 4 Aug 2026 · print at 100% (no page scaling) and confirm the bars below · hundredyearchair.com

CORNERS from the lower-left of the bounding box (x right, y up), mm:

P1 (49.7, 0.0) **P2 (165.1, 115.5)** **P3 (120.5, 196.0)** **P4 (0.0, 185.4)**
HOLES: rear leg (141.8, 92.1) front leg (159.6, 125.4) seat (24.5, 187.6) **P3 · 114°** back (8.4, 154.0)

Stock: 25 mm hardwood. TWO per chair: the same blank flipped over serves left and right, so one template cuts both. Glue this sheet to the blank, saw to the line, then drill the four centers PERPENDICULAR to each face, centered in the thickness (12.5 from either face). Diameter and depth to suit M6 threaded inserts; bolts are M6 × 20 through the panels.

Centers realize the panel stations: seat 25 from rear edge, back 160 from bottom end, front leg 390 / rear leg 420 from feet.
